

NEW YORK CENSUS EMPLOYMENT IN TECHNOLOGY TRENDS

Zoya Raja, Gabriel Molina,
Jefferson Rosa, Christina Gomes

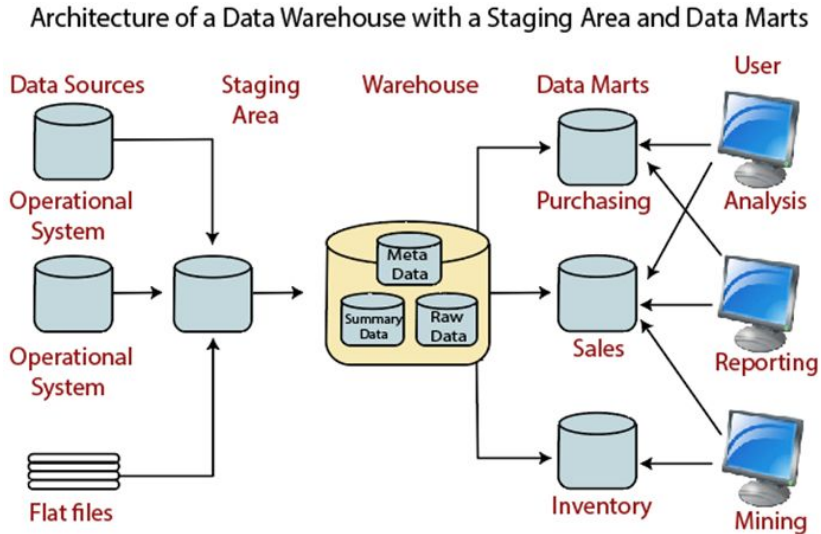

CST 4704 OL54

Introduction

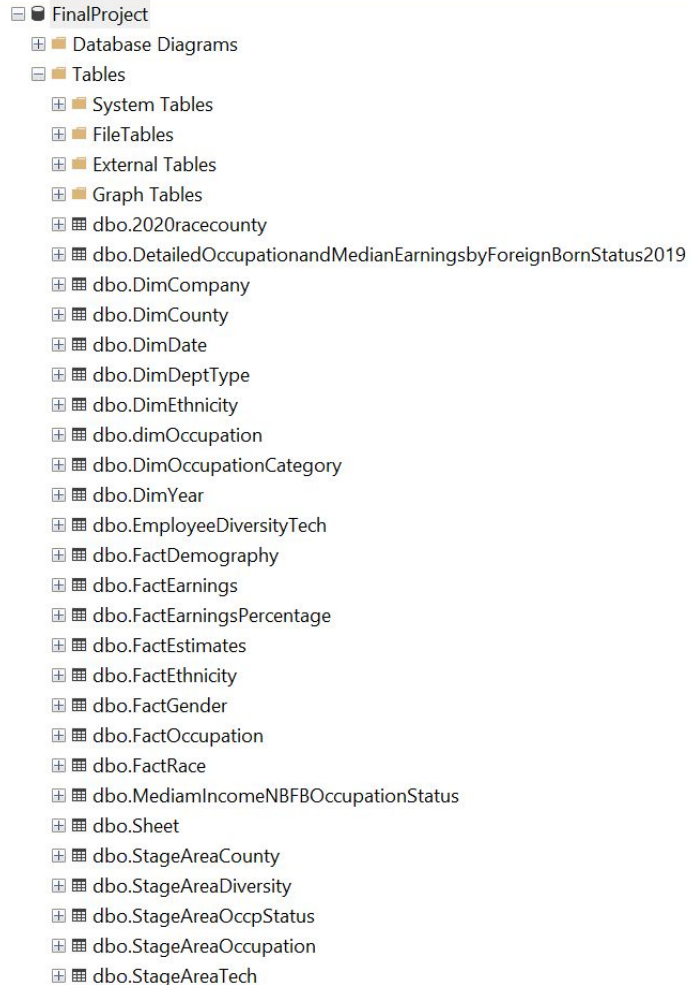

- This project has an objective to cross references the past census employment in technology, in New York.
- This data analysis modeled the future trends of employment in technology in New York.
- The data of the past census in employment in the areas of technology in New York are age, ethnicity, and gender. These databases were cross referenced to predict future trends in employment.
- This was objective and analysis was executed through ETL, SSIS, SSAS, and SSRS Reports.

SSIS Design:

The screenshot displays the SSIS Design View for a project named 'FinalProject.dtsx'. The main canvas shows a data flow diagram with various data sources and destinations. The Solution Explorer on the right shows the project structure, and the Properties window at the bottom right shows the properties for the 'FinalProject Package'.

Conclusion:

- In conclusion, this project has projected the future employment trends with the past census data in employment in the areas of technology.
- This project had helped cross reference and analyze the census data through ETL, SSIS, SSAS, and SSRS Reports.
- Using the technical analysis made in this project it can help the future employment seekers in technology in New York from the minority in age, ethnicity, and gender.
